(I) Kãa, Kai, and Khai (1/1) [Solution]

11.

1. S
2. B
3. R
4. J
5. D
6. G
7. F
8. H
9. C
10. E
11. P
12. M
13. O
14. K
15. L
16. T
17. A
18. I
19. N
20. Q

12.

lõm: air
kãa: kettle/pot
chiãng: city

13.

beautiful line: *nãeo ngãam*
[Note that the word for “beautiful” is in the description.]

(J) You Made Me See (1/1) [Solution]

J1.

- (i) You (s.) heard us.
- (ii) They (m.) do not want to heal them (m.) again.
- (iii) We did not make you (pl.) visit.

J2.

- (i) *aarechaparapiramanahâ isa*
- (ii) *nojamachajimari*
- (iii) *aapipinimarona*

Explanation

NEG aa-	SUBJ	stem	VOL/CAUS -pira -chaji	-ma	REPET -naha	OBJ	3PL.SUBJ -na
------------	------	------	-----------------------------	-----	----------------	-----	-----------------

The suffix *-ma* appears in all cases, except when *-pira* by itself.
The subject affixes are as follows:

	Singular	Plural
1st	<i>no- / n-</i>	<i>a- / aw-</i>
2nd	<i>pi- / p-</i>	<i>i- / O- isa</i>
3rd Masculine	<i>i- / r-</i>	<i>i- / r- isa</i>
3rd Feminine	<i>ru- / r-</i>	<i>ru- / r- -na</i>

The object affixes are as follows:

	Singular	Plural
1st	<i>-no</i>	<i>-î *</i>
2nd	<i>-i</i>	<i>-î * isa</i>
3rd Masculine	<i>-ri</i>	<i>-na</i>
3rd Feminine	<i>-ro</i>	<i>-rona</i>

Note: **a-î > âî*

(K) The Pimpled Toad (1/2) [Solution]

K1.

I-G-E-F-O-P-B-Q-H-C-D-N-J-K-A-L-M

Title: I) *á-jieu lú-lì gù báo-táng*

1. G) *nỳ hì gù tú lí-á mào njíh tái jieu lú-lì.*
2. E) *tú lí-á hì, jieu, F) gū yā nǎo jỳ "ghǎi.*
3. O) *tái á-jieu hì, jỳ yā nǎo gú "ghǎi, P) víe gū "ghǎi íeh tá-tìe.*
4. B) *jỳ já yā nǎo gū nghǎi, yā drìh gū dlá "drũ,*
5. Q) *lái "tú-dlí láí ā-"tú bào áo,*
6. H) *"zā áo drài nǎo táo gū "ghǎi.*
7. C) *tú lí-á jǐ-á, jieu, D) gū yā nǎo jỳ "ghǎi lài.*
8. N) *tái lí-á jáng láí lí-fáo J) dráo bí-xá dlò hà-hà.*
9. K) *tái jieu tlíe tlw̄ bào láí bào áo lèu.*
10. A) *tái lí-á jỳ áo "trìeh dái jieu, "trìeh hì táo*
11. L) *tái lí-á lí-mù jáng lí-fáo ghá hì M) á á, bè-lá-lá, á á, bè-lá-lá*

- A. *lí-á* 'crow'
- B. *já* 'if'
- C. *jieu* 'toad'
- D. *lài* 'so there!'
- E. *hì* 'say'
- F. (no words)
- G. *mào* 'go'
- H. *áo* 'water', *nǎo* 'eat'
- I. *gù* 'who (is)'
- J. *dráo* 'towards / upwards'
- K. *bào* 'pool'
- L. *jàng* 'stretch'
- M. *bè-lá-lá á á* 'all for nothing, ah-ah'
- N. *jàng* 'stretch'
- O. *yā* 'want', *"ghǎi* 'flesh'
- P. (no words)
- Q. *"tú-dlí* 'stream'

K2. C₃ T_n, Y⁻ J^o L_{ii} E₃ Ā J["] E₃ T⁻ J['] C_Tr.

(K) The Pimpled Toad (2/2) [Solution]

K3.

Pollard Script:

- Consonants are written with large letters, vowels with small diacritics.
- The position of the diacritic around the letter gives the tone: directly above = $\bar{\quad}$, top right = $\acute{\quad}$, right = $\tilde{\quad}$, bottom left = $\grave{\quad}$.
- Nasalization is marked with the letter C (n) before the consonant.
- The components of compounds are written separately.

Miao Grammar:

- Word order is generally SVO, modifiers after modified
- Zero copula
- Tense not explicitly marked—past tense generally assumed
- $tái$ and $tú$ both used to mark noun phrases

(L) Shiva Sutras (1/1) [Solution]

L1.

- (i) $i u r l$
- (ii) $h y v r l$
- (iii) $kh ph ch ṭh th c ṭ t$

L2.

- (i) $ñ a M$
- (ii) $a i C$
- (iii) $a L$

L3.

A pratyahara consists of the first of the sounds desired, plus the vowel a if the first of the sounds desired is a consonant, followed by the capital letter immediately following the last of the sounds desired.

L4.

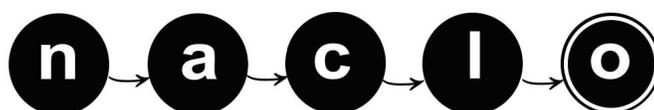

For a member of the set $i u r l$, substitute the corresponding member of the set $y v r l$ ('semivowels') when followed immediately by a member of the set $a i u r l e o ai au$ ('vowels').

L5.

- (i) "for X..."
- (ii) "... substitute Y..."
- (iii) "... before/when followed (immediately) by Z."

L6.

- (i) jagaddhana
- (ii) tadduḥkha
- (iii) no change

(M) Adjupectiheaval! (1/1) [Solution]

M1.

A is written by a spambot. The use of “yet” here connects two positive adjectives, which although grammatical, does not make sense.

M2.

13. Real
14. Real
15. Spam
16. Spam
17. Real
18. Spam

Each review has the following structure: FOOD ADJ₁ CONJ ADJ₂ where each adjective is either positive (*manis* “sweet”, *lezat* “delicious”, *menggugah selera* “mouth-watering”, *baik* “good”, *sehat* “healthy”) or negative (*berminyak* “greasy”, *hambar* “tasteless”, *mahal* “expensive”). We refer to this as the adjective’s polarity.

Note also that *tidak* “not” before an adjective negates it.

CONJ may be *dan* “and” or *serta* “and” (which link two adjectives with the same polarity), or *namun* “but” (which links two adjectives with opposite polarities). Incorrect use of these connectors means that the sentence is incorrect.

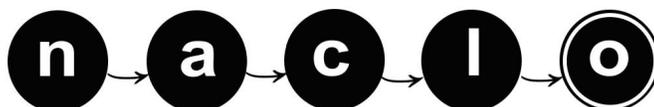

M3.

The polarity of the three new adjectives introduced here depends on context. Our six food items can be split into two groups from the dictionary entries:

- *Kue*, or soft desserts (*lemang*, *onde-onde*, and *poffertjes*)
- *Kerupuk*, or crackers (*renggingang*, *rempeyek*, and *kemplang*). These are described as *goreng* (“fried”) in the dictionary.

Then *kue* should be soft (*lembut*) and tender (*halus*), while *kerupuk* should be crunchy (*garing*).

28. Spam
29. Spam
30. Real
31. Real

(N) You Can't Handle the Truth (1/2) [Solution]

The 18 total distinct statements come from:

- 2 each from the original three statements (without and with substitution) = 6
- 4 each from the three new identity statements ($X = Y$, $X = X$, $Y = Y$, and $Y = X$) = 12

N1. For example:

Given a statement "X =/is/was Y" in *TL*,

- replace X with Y in any statement before uttering; or
- replace Y with X in any statement before uttering; or
- both of these.

N2. It depends on the new statement's "form" and how it relates to the old ones. The most basic cases are:

- 1, if new is a non-ID that does not coordinate with any ID
- 2, if new is a non-ID that coordinates with one ID
- 4, if new is ID that does not coordinate
- 5, if new is ID that coordinates with one non-ID

[“ID” means a statement of the form, “X =/is/was Y”; non-ID is anything else; “coordinating” means sharing a string]

N3. There is only one correct answer for each:

- a. Ruth has 2 + 2 siblings.
- b. Ruth knows Ottawa.
- c. Ruth prefers the Washington Capitals to the the capital city of Canada Senators.
[note the repeated “the”]
- d. Ruth named her stuffed, toy bear after the 26th president of the U.S.
- e. Ruth named her stuffed, toy bear the 26th president of the U.S.

(N) You Can't Handle the Truth (2/2) [Solution]

N4. Answer and explanation were graded together as a pair. Some acceptable answer/explanation pairs for each are:

- a. *True* — $2 + 2$ evaluates to 4
[Note that “*Weird—it’s unnatural to talk in arithmetic*” is not acceptable here. We know that Alfred judges such statements as “The U.K. contains $2 + 2$ countries” as *True*. We are also told that Alfred and Ruth agree on all judgments.]
- b. *False* — Ruth may not “know,” *i.e.* be familiar with, Ottawa, so we do not know enough about Ruth and should select *False*.
Weird — the change in sense of “knows” (from “can identify” to “is familiar with”) likely confuses Alfred and Ruth and prevents them from interpreting the statement easily.
True — Ruth has heard of Ottawa, since she has feelings about the Ottawa Senators, and this is enough to conclude that she “is familiar with” Ottawa
- c. *Weird* — repeated “the” is ungrammatical
Weird — “the the capital city of Canada Senators” is not a real entity, so the statement cannot be interpreted.
False — “the the capital city of Canada Senators” is not a real entity, so Ruth has no feelings about it. We do not know whether Ruth feels net positively or negatively about the Capitals, so we do not know enough about Ruth and should select *False*.
True — “the the capital city of Canada Senators” is not a real entity, so Ruth automatically prefers the (existing) Capitals.
- d. *True* — Ruth did indeed name the bear after this man. Whether or not she knew he was the 26th president of the U.S. does not affect the truth of the statement.
- e. *False* — Ruth’s bear is not named “the 26th President of the U.S.”
False — Ruth did not “name” her bear (*i.e.* “designate him to serve as”) the 26th President of the the U.S. (we can safely assume, or we don’t know enough to say for sure.)

N5. Some ideas:

- recognize compound names like “Ottawa Senators” and avoid internal replacements
 - maybe use a list of these, or search for n-grams in a corpus
- avoid replacements after (mental/indirect speech) words like “knows,” “believes,” “hopes,” etc.
 - store a list of these words in memory
- distinguish “use” from “mention” (*e.g.* in sentence (e), “Theodore Roosevelt” is mentioned)
 - use context (other nearby words) to see, *e.g.* whether a human’s name is used to talk about a human (probably “use”) or a stuffed toy (probably “mention”)
- distinguish “is” (and “was”) of identity (“TR was the 26th President”) from “is” (and “was”) of predication (“TR was a president”)

(O) We're Counting on Yoruba (1/2) [Solution]

O1.

a. <i>àádota</i>	50	10 off 3(score)
b. <i>àrúndogórin</i>	85	5 + 4x20
c. <i>aárùndilogórin</i>	75	5 before 4x20
d. <i>ẹ̀tàdogórun</i>	103	3 + 5x20
e. <i>òkándilogóji</i>	39	1 before 20x2

Note: *òkán* has not been seen in the data but if you realise there are only words for 1-5 because of the counting back system, it must be 1: we've seen 2, 3, 4, 5.

O2.

a. 12	<i>ẹ̀jilá</i>	2 teen
b. 90	<i>àáadorun</i>	10 before 20x5
c. 57	<i>ẹ̀ẹ̀tádilogóta</i>	3 before 20x3
d. 45	<i>àrúndogóji</i>	5 + 20x2
e. 99	<i>òkándilogórun</i>	1 before 20x5

Yoruba's counting system is based on 20s, with counting back: the numbers 6, 7, 8, 9 are expressed as 4, 3, 2, 1 before the next ten. 30, 50, 70, 90 are expressed as 10 before the next 20.

In addition, the basic numbers undergo some tone pattern changes.

	Base number	Counting back + <i>dil</i>	Counting forward + <i>d</i>	X20 <i>ogó-</i>
1	<i>not shown</i>	<i>òkán</i>	<i>not shown</i>	<i>ogun</i> * (20)
2	<i>ẹ̀ji</i>	<i>eéji</i>	<i>ẹ̀ji</i>	<i>ji</i> (40)
3	<i>ẹ̀ta</i>	<i>ẹ̀ẹ̀tá</i>	<i>ẹ̀tá</i>	<i>ta</i> (60)
4	<i>ẹ̀rin</i>	<i>ẹ̀ẹ̀rìn</i>	<i>ẹ̀rìn</i>	<i>rin</i> (80)
5	<i>àrun</i>	<i>aárùn</i>	<i>àrùn</i>	<i>run</i> (100)
Tone pattern	` -	V' `	``	<i>ogó -</i>

Teens are expressed by adding *lá* to the base number. They are not shown here but there **are** base numbers for 6, 7, 8, 9, only used as units. Odd 20s are expressed by *àádo* '10 off'.

The base form of 1 and the form for counting forward, eg 21, 31, do not follow the same tone pattern, and so are not used here. * Likewise 20 *ogun* is not fully regular. But since 20 is a special value, this is not surprising.

(O) We're Counting on Yoruba (2/2) [Solution]

So the given data can be glossed as follows:

<i>èji</i>	2	
<i>ẹrin</i>	4	
<i>àrun</i>	5	
<i>ẹrinlá</i>	14	4 teen
<i>eéjidilogun</i>	18	2 before 20
<i>ẹẹ̀rìndilogóji</i>	36	4 before 20x2
<i>ẹ̀rìndogóji</i>	44	4 + 20x2
<i>àádorin</i>	70	10 off 4(score)
<i>ẹẹ̀tádilogórin</i>	77	3 before 20x4
<i>ẹ̀tádogórin</i>	83	3 + 20x4

(P) Doubling Up on Nakanai (1/1) [Solution]

P1.

Underlying Form	Reduplicated Form	Meaning
<i>tahalo</i>	<i>tahalalo</i>	'man'
<i>sekela</i>	<i>sekelakela</i>	'one at a time'
<i>pita</i>	<i>papita</i>	'muddy'
<i>bake</i>	<i>baebake</i>	(a kind of fish)
<i>loke</i>	<i>lokeloke</i>	'to break (a rope)'
<i>voro</i>	<i>vorovoro</i>	'to pound'
<i>valolohoka</i>	<i>valolohokoka</i>	'to warn someone of trouble'
<i>pasi</i>	<i>paipasi</i>	'extremely'
<i>kusa</i>	<i>kakusa</i>	'to shout'
<i>bebe</i>	<i>bebebe</i>	'butterfly'
<i>hilo</i>	<i>hililo</i>	'to see'
<i>sivo</i>	<i>sosivo</i>	'to descend'
<i>rabu</i>	<i>raburabu</i>	'charred wood'
<i>tarile</i>	<i>tarilerile</i>	'tree'
<i>sobe</i>	<i>soesobe</i>	'young woman'
<i>vitaumetari</i>	<i>vitaumetaritari</i>	'younger sibling'
<i>vituga</i>	<i>vitatuga</i>	'to walk'

P2.

Let $C_1V_1(C_2)V_2$ be the last two syllables of the word. Then follow the following rules:

- If $C_1 = h$, insert $-V_1C_2-$ after C_1
- Otherwise, insert before the last two syllables [following the rules in order]:
 - If $C_1V_1 = C_2V_2$, insert $-C_1V_1-$
 - If there is at least one liquid $\{l, r\}$ in $\{C_1, C_2\}$, insert $-C_1V_1C_2V_2-$
 - If $V_1 > V_2$, insert $-C_1V_1V_2-$
 - If $V_2 > V_1$, insert $-C_1V_2-$

Note that vowels are ranked by sonority as follows: $a > o > e > u = i$

Source: Dimensions of Variation in Multi-Pattern Reduplication (Spaelti, 1997)

(Q) Cut to the Chase (1/1) [Solution]

Q1.

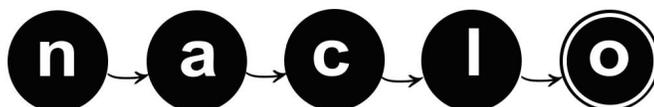

- (a) — *ά-*
- (b) — *άα-*
- (c) — *έ-*
- (d) — **none**
- (e) — *-οκι*
- (f) — *ολμοσανί*
- (g) — *ολμοσανί*

Q2.

A and F

Q3.

	Sentence	Translation
A	<i>άδύη ολμοσανί ολκετά</i>	An ungrammatical sentence.
B	<i>άδύηοκί ολμοσανί ολκετά</i>	I cut the tree for the warrior.
C	<i>άδύη ολμοσανί</i>	I cut the warrior.
D	<i>άαδύηοκί ολμοσανί</i>	He/she/it cut the warrior for me.
E	<i>άαδύηοκί ολκετά</i>	He/she/it cut the tree for me.
F	<i>άαδύη ολμοσανί</i>	An ungrammatical sentence.
G	<i>άαδύη ολμοσανί</i>	The warrior cut me.
H	<i>έδύη ολμοσανί ολκετά</i>	The warrior cut the tree.
I	<i>έδύηοκί ολμοσανί ολκετά</i>	He/she/it cut the tree for the warrior.
J	<i>έδύηοκί ολμοσανί</i>	The warrior cut him/her/it for him/her.
K	<i>έδύη ολμοσανί</i>	He/she/it cut the warrior.

(R) The Obviative Solution (1/3) [Solution]

R1.

Singular	Plural	Obviative Singular	Locative Singular	Meaning
hisei	hiseino?	hisein	hiseinewe?	'woman'
hotii	hotiwo?	hotiwi	hotiwo?	'car'
nebi	nebiho?	hibio	nebihewe?	'one's older sister'
neicet	neicetino		neicetine?	'one's hand'
nooku	nookuho?	nookuo	nookuhowe?	'beaver'
hiseeθ	hiseeto?	hiseet	a. hiseetewe?*	'pine tree'
b. ooθ	ooto		oote?	'leg'
beiciθ	beicito		beicite?	'tooth'
coox	c. cooθo?	d. cooθ	e. cooθowe?*	'enemy'
ce?einox	ce?einoθo		ce?einoθe?	'bag'
hinen	hinenino?	f. hinenin	g. hineninewe?	'man'
wotoo	h. wotooho	i. N/A	wotoohe?	'pair of pants'
j. woθonohoe	woθonohoeno	k. N/A	woθonohoene?	'book'
l. nii?eihii	m. nii?eihiiho?	nii?eihii	n. nii?eihiihewe?*	'eagle'
ce?ibes	ce?ibexo	o. N/A	p. ce?ibexe?	'block (of wood)'
benes	q. benexo	r. N/A	s. benexe?	'arm'
t. nesi	nesiho?	u. hisio	v. nesihewe?	'one's uncle'

*For the cells marked *, *hiseetowe?*, *cooθowe?*, and *nii?eihiihowe?* were also marked as correct, respectively. These forms are generated by the "alternate solution," under Morphology.

(R) The Obviative Solution (2/3) [Solution]

Stems

Nouns have two “stems,” S1 and S2. Rules for going from S1 to S2:

	S1	→	S2
a.	-V		-Vh, -Vn, or -Vx
b.	-t		-tin
c.	-n		-nin
d.	-θ		-t
e.	-x		-θ
f.	-s		-x

All transformations except for (a.) can be performed uniquely in the direction of S1 → S2, and all can be performed uniquely in the reverse direction of S2 → S1.

For brevity, the same patterns can also be expressed with the following scheme:

$$\begin{aligned}
 s &\leftrightarrow x \leftrightarrow \vartheta \leftrightarrow t \leftrightarrow tin && \text{(process of phonetic softening or lenition)} \\
 n &\leftrightarrow nin \\
 V &\leftrightarrow Vh, Vn, \text{ or } Vw
 \end{aligned}$$

and the rule:

Locate the stem’s ending (as specifically as possible) in the above chart.

Move one step right across a “↔” to convert S1 → S2, and one step left for S2 → S1.

Animacy

Nouns are classified as animate or inanimate semantically — note, body parts are inanimate, while “pine tree” and “car” are animate (all others are as expected).

Morphology

The noun form in each case is:

	singular	plural	obviative singular	locative singular
Animate	S1	S2 + o?	if S2 -h, then S1 + o else S2	S2 + Vwe?, where: if root contains o, then V = o else V = e*
Inanimate	S1	S2 + o	N/A	S2 + e?

The vowel rule for the locative singular for animate nouns is a kind of vowel harmony.

Note that this rule can be described, consistently with the data, in several ways, including:

- if root contains e, V = e
- else V = o

(R) The Obviative Solution (3/3) [Solution]

*Alternate solution: consistently with the data, the vowel alternation pattern in the locative singular for animate nouns can be explained as:

- $V = e$ (for humans)
- $V = o$ (for non-humans)

This alternate solution is not an actual phenomenon in Arapaho, but since it fits the data given, it was scored identically, in both parts (R1 and R2), to the vowel harmony solution.

Possession

The prefix “ne-” indicates possession (in English, “one’s...”). In the obviative singular, when this form exists (*i.e.* for animate nouns):

ne- → hi-

One way of explaining why this change happens is that the grammatical person is different in the obviative.
